PROFILE

Senior Full-Stack Engineer with 10+ years of experience building large-scale consumer platforms, subscription products, and developer-facing systems. Strong background in React, TypeScript, GraphQL, Java, Python, and cloud-based application architecture. Experienced in designing scalable APIs, optimizing frontend performance, and delivering user experiences used by millions of customers. Proven ability to lead technical initiatives, mentor engineers, and collaborate across product, design, and engineering organizations to deliver measurable business impact.

SKILLS

Languages: Java, Python, TypeScript, JavaScript, Go, SQL

Backend & APIs: Java, Python, Go, Ruby on Rails, FastAPI, Django, Django REST Framework, Flask, Node.js, RESTful API design, API implementation, GraphQL, Authentication (OAuth2, JWT), Webhooks, Async processing

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, MUI, Chakra UI, Apollo

CI/CD & DevOps: CI/CD pipelines (GitHub Actions, GitLab CI) | Automated testing, deployment pipelines | Infrastructure monitoring and logging

AI & Machine Learning: Generative AI, Large Language Models (LLMs), AI Integrations, Prompt Engineering, RAG, AI Agents, Vector Search

Architecture: System Design, Distributed Systems, Scalable Web Applications, Cloud-Native Architecture, Event-Driven Systems

PROFESSIONAL EXPERIENCE

The New York Times, *Senior Software Engineer*

06/2023 – Present
New York, US (Remote)

- Architected and delivered customer-facing React and TypeScript applications supporting subscription growth, content discovery, and reader engagement initiatives across multiple digital products.
- Designed federated GraphQL services that unified several backend domains into a single API layer, improving development velocity and simplifying service integrations across product teams.
- Developed high-traffic frontend experiences used by millions of readers while maintaining accessibility, responsiveness, and consistent user experience standards.
- Reduced average page-load times by approximately 22% through rendering optimizations, code splitting, asset delivery improvements, and GraphQL query tuning
- Built reusable UI frameworks and shared component libraries adopted across multiple engineering teams, reducing duplicate implementation effort and improving consistency.
- Implemented experimentation and A/B testing capabilities that accelerated feature validation cycles and improved product iteration speed by roughly 30%.

- Optimized GraphQL federation patterns and backend integrations, reducing query latency by 18% while improving API reliability for customer-facing applications.
- Developed personalization experiences leveraging behavioral and subscription data to improve content relevance and reader engagement.
- Partnered closely with product managers, designers, analysts, and editorial stakeholders to define requirements and deliver high-impact product enhancements.
- Mentored engineers through technical design reviews, architecture discussions, and code reviews.
- Participated in hiring activities including candidate interviews and technical assessments.
- Evaluated AI-assisted workflows for editorial operations and engineering productivity, including LLM-based search, content discovery, and knowledge retrieval initiatives.
- Prototyped generative AI solutions that improved internal knowledge access and reduced manual research effort for editorial teams.

Tech Stack: React, TypeScript, Next.js, GraphQL, Apollo Federation, Node.js, PostgreSQL, Redis, AWS, Docker, Kubernetes

Policygenius, *Software Engineer*

07/2020 – 05/2023

New York, US (Hybrid)

Digital insurance marketplace supporting quote comparison, policy purchasing, and customer onboarding workflows.

- Developed customer-facing insurance applications supporting quote generation, policy comparison, and lead conversion experiences across multiple product lines.
- Led modernization initiatives that migrated legacy services into Python-based microservices and React applications, improving maintainability and deployment efficiency.
- Designed and implemented scalable backend APIs using Python, FastAPI, PostgreSQL, and Redis to support recommendation and pricing workflows.
- Improved API response times by approximately 25% through database optimization, caching strategies, and service-level performance tuning.
- Built React and TypeScript interfaces that simplified quote comparison workflows and contributed to improved customer conversion outcomes.
- Implemented GraphQL services that streamlined frontend-backend communication and accelerated feature delivery across product teams.
- Designed business rules engines supporting insurance eligibility, pricing calculations, and policy recommendation workflows.
- Enhanced deployment reliability through CI/CD automation, reducing release preparation effort by nearly 35%.
- Built internal operational tools supporting underwriting, customer support, and content management teams.
- Participated in architecture reviews, technical planning sessions, and engineering standards initiatives across multiple teams.
- Collaborated with product, design, and business stakeholders to prioritize roadmap initiatives and deliver customer-focused solutions.
- Mentored junior engineers through code reviews, technical guidance, and knowledge-sharing activities.

Tech Stack: Python, FastAPI, Django, React, TypeScript, GraphQL, PostgreSQL, Redis, AWS, Docker, CI/CD

Facebook

Software Engineer

01/2017 – 05/2020
New York, US (On-site)

- Built internal productivity platforms used by more than 1,000 employees across engineering and operational teams.
- Developed backend services using Java and Python supporting high-volume internal business applications and workflow automation.
- Created React-based applications that improved visibility into operational metrics and engineering processes.
- Implemented distributed caching and data-access solutions that improved application responsiveness and system scalability.
- Reduced environment setup and onboarding time by approximately 40% through automation tooling and developer workflow improvements.
- Participated in large-scale system design reviews involving distributed services, performance optimization, and platform reliability.
- Developed APIs and service integrations supporting multiple business-critical internal systems.
- Contributed to monitoring, deployment automation, incident response, and production troubleshooting efforts.
- Mentored interns and early-career engineers through technical reviews and project guidance.

Tech Stack: Java, Python, React, Django, MySQL, Redis, Docker, AWS, REST APIs

Software Engineer Intern

05/2016 – 01/2017
New York, US (On-site)

- Developed automated unit and integration tests for Java-based services and React applications, improving code quality and release confidence.
- Built backend functionality using Python and Django to support internal tooling and engineering workflows.
- Developed React and JavaScript user interfaces for internal applications and proof-of-concept projects.
- Assisted senior engineers in implementing new product features, bug fixes, and platform enhancements.
- Contributed to frontend performance improvements and optimization efforts.
- Participated in code reviews, sprint planning, technical discussions, and engineering team activities.
- Developed scripts and automation tools that streamlined testing and development workflows.
- Collaborated with engineers across multiple teams to deliver features in fast-paced development environments.
- Gained hands-on experience with large-scale software development practices, CI/CD workflows, and distributed systems concepts.

Tech Stack: Java, Python, Django, JavaScript, React, SQL, Git, Linux

EDUCATION

Bachelor's Degree in Computer Science,
University of Alaska Anchorage

2012 – 2016 | United States
